EDUCATION

Bachelor of Engineering (BE) - Computer Science and Engineering Bangalore Institute of Technology	2023 – 2027 CGPA - 9.38
Senior Secondary Education Kendriya Vidyalaya	2021 – 2022 91.4%
Secondary Education Kendriya Vidyalaya	2019 – 2020 94.8%

SKILLS

Technical Skills

- Programming Languages : C/C++, Python, Java
- Web Development : HTML, CSS, JavaScript
- CS Fundamentals : Data Structures & Algorithms, OOPs, DBMS, SQL, Operating Systems, MongoDB
- Tools : Git/GitHub, VS Code, Figma

Soft Skills

- Problem Solving
- Leadership
- Adaptability
- communication
- Team Work

PROJECTS

Loan Management System | PHP, MySQL, HTML, CSS, JavaScript, Bootstrap

- Developed a full-stack Loan Management System for handling customer loan applications, approvals, and repayments.
- Designed and implemented user authentication, loan application forms, and EMI tracking functionality using PHP and MySQL.
- Created an admin dashboard to manage customers, approve/reject loans, and monitor repayment history.
- Utilized XAMPP and phpMyAdmin for local server setup and efficient database management.
- Applied relational database design to ensure efficient data organization and retrieval.

Twitter Sentiment Analysis | Python, Tweepy, TextBlob, Pandas, Matplotlib

- Built a sentiment analysis model to classify tweets as positive, negative, or neutral using NLP techniques.
- Used **Tweepy** to extract real-time tweets via Twitter API based on keywords and hashtags.
- Applied **TextBlob** for natural language processing and sentiment scoring.
- Visualized sentiment trends using **Matplotlib** and **Seaborn**.
- Cleaned and preprocessed text data for accurate analysis using tokenization and stopwords removal.

Research Paper Analyzer | Python, PyPDF2, NLTK, Tkinter, WordCloud

- Developed a Python application to extract and analyze text from research paper PDFs.
- Used **PyPDF2** for parsing and reading content from PDF documents.
- Applied **NLTK** and **TextBlob** for keyword extraction, sentiment analysis, and summarization.
- Created a simple GUI using **Tkinter** for user interaction and file input.
- Generated **word clouds** and sentiment graphs to visualize key insights from research papers.

ACHIEVEMENTS

Participated in Cell Verse Hackathon

Built NeuroCare - ECG & EEG Analysis Platform | React (TypeScript), Tailwind CSS, Flask (Python), NumPy, scikit-learn, Three.js, React Three Fiber, React Hooks, Machine Learning, Comprehensive Testing Suite.

- NeuroCare is a modern web application that provides real-time analysis of ECG (electrocardiogram) and EEG (electroencephalogram) data, featuring 3D visualizations, anomaly detection, and AI-powered health recommendations.
- Machine learning-powered anomaly detection

EXTRA CURRICULAR ACTIVITY

Core Technical Member - Google Developer Group (GDG)

- Contributed to GDG's official website as part of the core technical team.
- Participated in open-source initiatives and workshops focused on community-driven development.
